

HUB / SATELLITE

Hub / Satellite Configuration allows you to operate multiple charging stations cost effectively by connecting up to 20 charging points (Satellites) to each other through a single modem (Hub) and BackOffice plan.

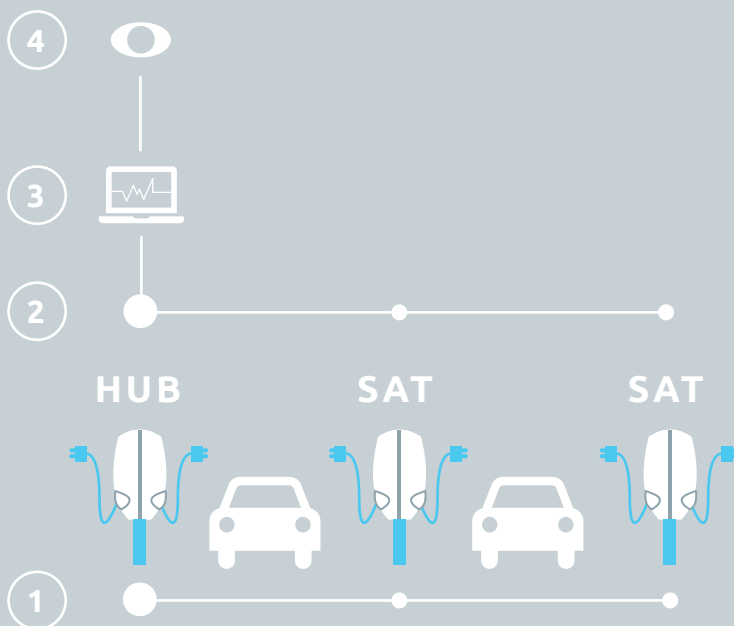

SCENARIO

3X CHARGING STATIONS WITH DUAL SOCKETS AT YOUR PARKING FACILITY

HUB SATELLITE IN ACTION

You receive essential insights into your charging sessions at all 3 charging stations through a single BackOffice account/subscription.

The BackOffice processes the data.

The HUB station gathers and sends all communications from the satellite stations to the BackOffice.

An underground cable connects all satellite stations (SAT) to the HUB station.

The Hub / Satellite Configuration is one of EV-Box's "Smart Charging" services. These services optimize the charging infrastructure through using the available power flexibly and efficiently. Learn more about Smart Charging and how it benefits your business at [ev-box.com](https://www.ev-box.com)
